

San Pedro Elementary School Community Update

Much progress is being made on construction at San Pedro Elementary School! Nearing completion are six new state-of-the-art Kindergarten classrooms, as well as a new Administration building. Roof screen sheltering for HVAC units and tubes will be installed shortly. Move-in to these new buildings is scheduled for summer. Modernization of Building A will begin in mid-June.

This work includes installation of a whole new electrical system for the school. As part of the greater sustainability drive committed by San Rafael City Schools, the parking lot upgrades include installing EV Charging Stations and Solar Parking Shade Structures. These projects will generate power to help offset the District's current electrical usage resulting in significant energy savings. The recommended location for the solar shade system is highlighted in the drawing below. While the District is firming up a timeline and funding with PG&E for EV Charging, we are planning for installation during Summer 2019.
