Terra Linda High School Community Update

Community Meeting:
Friday, March 13, 2020, 8:00 - 9:00 AM
Terra Linda High School Innovation Hub

At this meeting, we'll share the latest information on the new construction work underway at Terra Linda High School under Measure B.

Design of the new gym building is underway! The new facility will have competition basketball and volleyball courts, bleachers with 1,200 seats, a lobby with concession space, a physical education (health) classroom, three team rooms, a trainer room, a conference room and new coaches' offices. This beautiful new gym will be a prominent building in front of the campus. Additionally, the campus frontage will receive a new look with a dedicated student drop-off zone, landscaping, have PG&E power poles removed, and associated utility lines buried underground to improve and beautify the front of the campus. Total Area: 20,328 square feet

Project Schedule:

This project is divided into two increments, described below, and will begin shortly:

- Increment 1: Site and building demolition, underground utility installation, site grading, and preparation of new building pad.
- Increment 2: New foundations and building construction, site paving, and landscaping.
